                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6226
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9555 G 9555
                                               Submitted (15-UUL-2002) Haruyasu Kinashi, Hiroshima University, bepartment of Molecular Biotechnology, Graduate School of Advanced Sciences of Matter; 1-3-1 Kagamiyama, Higashi-Hiroshima, Hiroshima 739-8530, Japan (E-mail:kinashiæhiroshima-u.ac.jp, Tel:81-824-24-7869, Fax:81-824-24-7869)
The nucleotide sequence has been determined by using restriction fragments and nested deletion fragments of the ordered cosmid library of pSLA2-L.
pSLA2-L is 210,614 bp long with G+C content of 72.8 % and carries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Streptomyces rochei

```
http://www.nih.go.jp/~jun/cgi-bin/frameplot.pl. Where possible we chose an initiation codon (atg, gtg, ctg or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13 bp before the initiation codon). If this could not be identified we chose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Three-fourths of the pSLA2-L DNA are occupied by biosynthetic genes (three PKS gene clusters for lankacidin, lankamycin and an unknown type II polyketide, a carotenoid biosynthetic gene cluster, many regulatory genes and others). The range of each biosynthetic gene cluster has been deduced by comparison with similar gene clusters in most cases and may be revised in future.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ishikawa and Hotta (FEMS Microbiol Lett 174: 251-253 (1999)) as
